Heating Degree Hours = Positive value of (66 degree Fahrenheit - average temperature for the day); negative values set to zero.
Cooling Degree Hours = Positive value of (average temperature for the day - 72 degree Fahrenheit); negative values set to zero
Normal weather based on 20 year average. Production figures shown above are based on net energy for load. Energy sales statistics are net of line losses and company usage. Percentage calculations based on actual figures.

Switched from a fiscal month to a calendar month in August 2011. August 2011 and beyond will reflect the change, while previous months are based on a fiscal month time period.
