Heating Degree Hours = Positive value of (66 degree Fahrenheit - temperature for the hour); negative values set to zero.
Cooling Degree Hours = Positive value of (temperature for the hour - 72 degree Fahrenheit); negative values set to zero
The equivalent days represents the sum of each days cooling (or heating) degree hours divided by 24.
Normal weather based on 20 year average. Production figures shown above are based on net energy for load. Energy sales statistics are net of line losses and company usage. Degree Days shown are rounded to nearest whole number. Percentage calculations based on actual figures.
