

This data should be read in conjunction with the Company’s third quarter earnings news release dated October 22, 2013 and DuPont’s 3Q 2013 Earnings Conference Call presentation materials posted on the Investor Center website at www.dupont.com.

Agriculture

Our Agriculture segment continued its industry leading performance with year-to-date sales growing 12 percent and operating earnings up 8 percent. In the third quarter, sales of \$1.6 billion grew 15 percent as growth in insecticide volume and seed price were partially offset by currency, primarily the Brazilian Real. In addition, we are now including Pannar Seed (Pty) Ltd. (Pannar) in our consolidated results after acquiring a controlling interest during the third quarter. Typical seasonal loss of \$62 million was lower than last year as sales growth and an equity re-measurement gain of \$26 million from the acquisition of a controlling interest in Pannar more than offset higher seed costs, reflecting finalization of the northern hemisphere season, continued investment to drive future growth, and negative currency.

Reviewing the individual businesses, let's start with Crop Protection. Sales for the quarter of \$726 million were up substantially at 21 percent. Volume growth in Latin America was led by strong demand for Rynaxypyr® as growers anticipate the continuation of heavy insect pressure. Expectations for higher soybean hectares also drove demand for fungicides, particularly picoxystrobin.

Rynaxypyr® continues to perform well and we anticipate sales will exceed \$900 million this year. Our crop protection and seed teams in Brazil have expanded testing of our Dermacor® seed treatment for corn and soybeans, based on proven Rynaxypyr® chemistry, and we remain on track for an expected late 2014 launch. Late last year, we launched a sister compound Cyazypr™, for which we continue to receive excellent field performance reports from our customers as we pursue new country registrations. Together, the portfolio of Rynaxypyr®, Cyazypr™, Dermacor® and Lumigen™ seed treatment are now on track to approach \$1.5 billion in peak annual sales in the next few years. Our fungicide portfolio also continues to show solid growth with the highly successful launch of our picoxystrobin fungicide, Aproach™, in the US this year.

Moving to the seed business, third quarter sales grew to \$907 million, up 10 percent. We had a solid start to the Latin America sales season despite the negative impacts of currency and growers reducing corn hectares in favor of soybeans. Pricing gains were led by the continued adoption of Intrasect®, dual-mode of action insect protected hybrids, which will represent about a third of Brazil corn volume this year. Likewise, recent investments in soybeans are paying off as growers in Brazil are increasing demand for locally developed, high-yielding, high-quality Pioneer brand soybeans. The acquisition of a controlling interest in Pannar in Africa also contributed positively to sales.

The USDA did not issue an October crop report and will not issue final 2013 acreage until January 2014 so it is too early to be definitive on market share. However, we are pleased with the competitive performance of the Pioneer business growing sales 11 percent through the first three quarters on the strength of price gains and higher corn volumes in North America.

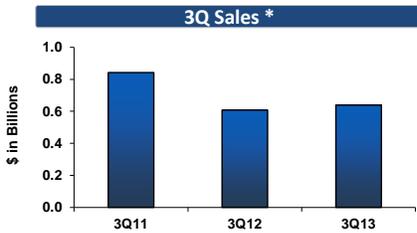

Finally, we are excited about what our customers are seeing during the harvest which is occurring later this year due to the delayed, wet planting season and the cooler than normal early summer. We will provide further details in the next few weeks as harvest wraps up across North America.

Moving now to the fourth quarter Outlook for Agriculture, we expect a substantial increase in sales on expectations of continued strong performance in both seeds and crop protection in Latin America, earlier shipment of safrinha corn seed enabled by recent investments in Brazil, an early start to North America seed shipments and a portfolio benefit from Pannar. The fourth quarter has increased in importance in Ag because our businesses have grown globally in China, India, Brazil, Eastern Europe and Africa. In North America, direct shipments to key growers are increasing and a portion of those shipments will shift forward to the fourth quarter this year. As a result of sales increases in seeds, continued growth in crop protection and lower anticipated seed input costs for 4th quarter North America sales, we expect to achieve a small fourth quarter profit in Ag for the first time. For the full year, we now expect operating margins will be about flat, overcoming the impact of the higher seed input costs earlier in the year.

Looking forward to 2014, we are keeping a close eye on corn and soybean markets and implications for the upcoming safrinha and Northern hemisphere planting seasons. Several important events will play out between now and when growers put seed in the ground next spring in North America. Specifically, we will see the completion of the North America harvest, the harvest of the summer crop in South America as well as safrinha corn planting in Brazil. As always, we remain close to our customers and are committed to providing them with innovative products and knowledge to help them meet the global demand for agricultural products.

Electronics & Communications

* Segment sales include transfers.
 ** See schedule C in the earnings news release for reconciliation of non-GAAP measures.

3Q Comments

- Sales up modestly on significantly higher volume
- Price down moderately primarily due to lower metals pass through
- Photovoltaics demand the key volume driver
- Operating earnings up \$39 million or 67% primarily due to higher volume

4Q Outlook

- Sales up modestly on higher demand in photovoltaics and consumer electronics
- Forecast PV installations up ~10% for full year
- Consumer electronics benefitting from launches of new mobile devices
- Operating earnings up substantially on higher volumes, primarily in photovoltaics

9

Electronics & Communications

Sales of \$638 million increased 5 percent driven by higher sales volumes. Prices were down 9 percent, due primarily to lower metals pass through.

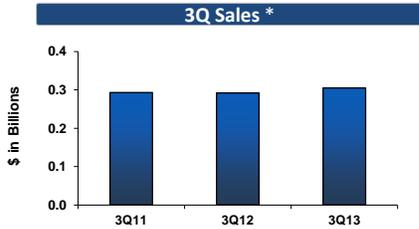

Volumes were up 14 percent led by higher sales of Solamet® paste and Tedlar® PVF film into the photovoltaics (“PV”) market. Stronger underlying demand versus a weak prior year and share gains were partially offset by lower material usage.

Operating earnings of \$97 million were up \$39 million or 67 percent, due to higher volumes as well as productivity gains.

For the fourth quarter, we anticipate sales will be up modestly and earnings up substantially on continued demand for materials sold into photovoltaics, partially offset by the impact of lower metals pricing. For full year 2013, we anticipate PV installations will be up approximately 10 percent versus 2012.

Industrial Biosciences

- #### 3Q Comments
- Sales up 4% on higher volumes
 - Strong demand for Sorona® polymer for carpeting and apparel
 - Operating earnings were up 13% as sales growth and lower costs more than offset higher raw material costs

- #### 4Q Outlook
- Sales up moderately on strength of recent enzyme launches, growing demand for Sorona® polymer and a recovery in ethanol production
 - Operating earnings up significantly from sales growth and continued cost discipline improving margins

* Segment sales include transfers.
 ** See schedule C in the earnings news release for reconciliation of non-GAAP measures.

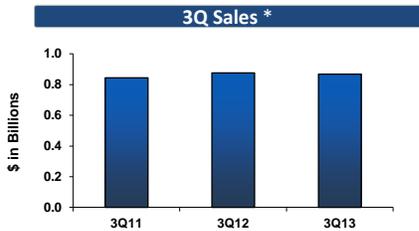

Industrial Biosciences

Sales in our Industrial Biosciences segment were 4 percent higher at \$305 million on strong demand for Sorona® polymer for carpeting and apparel. Operating earnings of \$45 million were up 13 percent as sales growth and lower costs more than offset higher raw material costs.

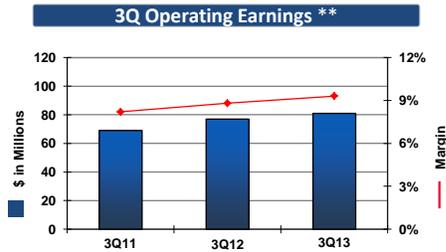

For the fourth quarter, we expect moderate sales growth on the strength of recent enzyme launches for laundry and animal nutrition and growing demand for Sorona® polymer for use in carpet. We also expect a recovery in ethanol production due to the availability of new crop corn at low prices, low ethanol inventories, and an improved outlook for exports from the U.S. Operating earnings are expected to be up significantly as a result of sales growth and continued cost discipline improving margins.

Nutrition & Health

- #### 3Q Comments
- Sales 1% lower
 - Operating earnings up 5% as productivity overcame the impact of higher cost guar inventory and negative currency
 - Operating margins improved 2 percentage points sequentially

- #### 4Q Outlook
- Market conditions are expected to be unchanged
 - Sales up slightly from continuing strong demand for probiotics, cultures and specialty proteins offset by the impact of prior year manufacturing site closures and negative currency
 - Operating earnings up substantially as productivity actions drive improved margins

* Segment sales include transfers.
 ** See schedule C in the earnings news release for reconciliation of non-GAAP measures.

Nutrition and Health

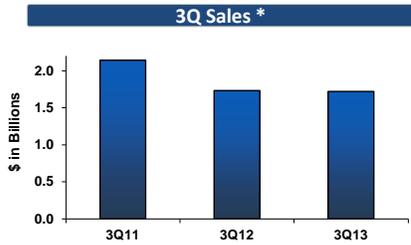

Nutrition and Health sales of \$868 million were 1 percent lower. Operating earnings of \$81 million were 5 percent higher as the benefits of productivity overcame the impact of higher cost guar inventory and negative currency. On a sequential basis, operating margins improved 2 points.

As we look to the fourth quarter, market conditions are expected to be largely unchanged. We anticipate sales to be up slightly from continuing strong demand for our probiotics, cultures, specialty proteins, and pricing gains, partially offset by the impact of prior year manufacturing site closures and negative currency. Operating earnings are expected to be up substantially as productivity actions drive improved margins.

Performance Chemicals

Titanium Technologies (DTT), Chemicals & Fluoroproducts (DC&F)

- #### 3Q Comments
- Sales revenue essentially flat on higher TiO₂ and fluoropolymer volumes offset by lower prices
 - TiO₂ volume up 25%, double digit volume gains in all regions
 - Three consecutive quarters of sequential and YoY volume growth in TiO₂
 - Operating earnings down 38% primarily on lower prices and higher raw material costs, partially offset by higher volumes

- #### 4Q Outlook
- Sales up slightly on higher TiO₂ and fluoropolymer demand
 - Anticipate TiO₂ industry fundamentals continue to improve
 - Volumes in chemicals and fluoroproducts expected to increase
 - Operating earnings down modestly, higher raw material costs partially offset by higher volumes

* Segment sales include transfers.
 ** See schedule C in the earnings news release for reconciliation of non-GAAP measures.

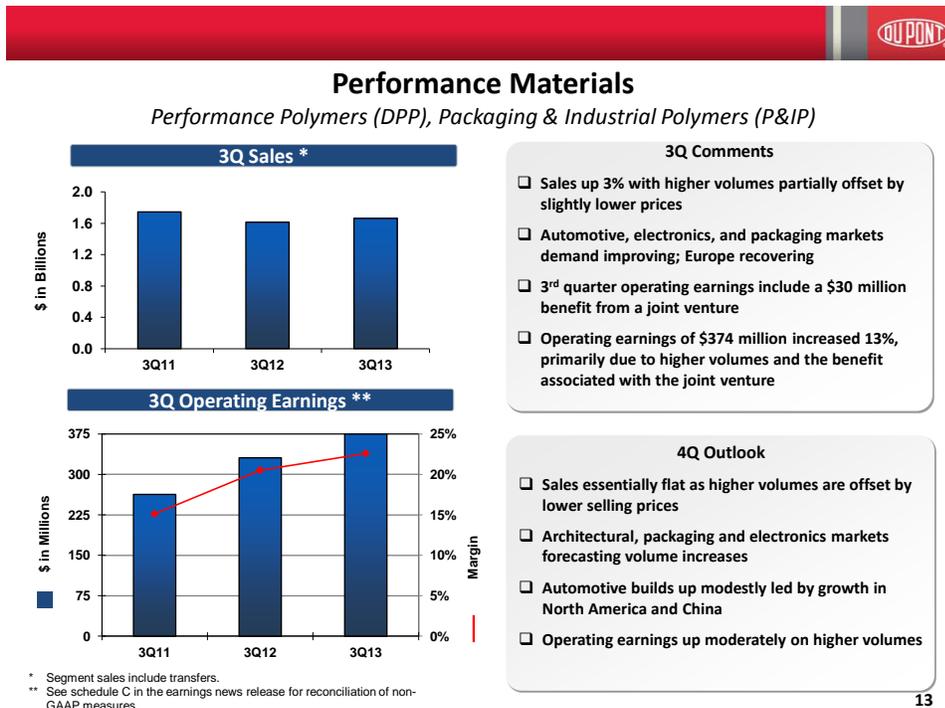

Performance Chemicals

Segment sales of approximately \$1.72 billion were essentially flat as increased TiO₂ and fluoroproduct volumes were offset by lower prices. Starting with TiO₂, volumes increased 25 percent on a year over year basis and 1 percent sequentially, marking three consecutive quarters of year over year and sequential volume growth. All regions delivered double digit volume improvements, with particular strength in EMEA and Asia. We view customer inventory levels as normal and published reports indicate producer inventory levels remain essentially unchanged from the second quarter while capacity utilization increased slightly. In Chemicals and Fluoroproducts, volume gains in fluoropolymers and fluorochemicals were offset by declining prices.

Although third quarter segment operating earnings declined 38 percent, this marked a substantial improvement versus the second quarter when segment earnings declined 56 percent.

In the fourth quarter, we anticipate continued improvement in year over year volumes and improving industry fundamentals. Segment earnings are forecasted

to be down modestly as higher raw material costs and lower prices are partially offset by higher volumes.

Performance Materials

Sales of \$1.66 billion were up 3 percent with segment volumes increasing 6 percent, partially offset by slightly lower prices. Stronger sales in automotive, electronics, and packaging markets coupled with improving results in Europe fueled the sales growth. In China, volumes sold into automotive were up substantially due to our continued investment in strong application development and local R&D support.

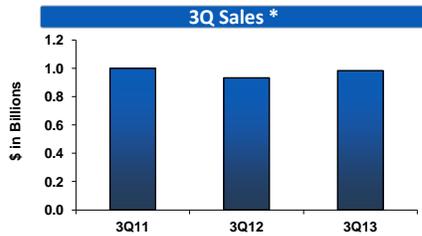

Third quarter operating earnings of \$374 million increased \$43 million, including a \$30 million benefit from a joint venture. This benefit, combined with lower feedstock costs and higher volumes, increased operating earnings for the quarter by 13 percent.

For the 4th quarter, we anticipate sales will be essentially flat and operating earnings will increase moderately on higher volumes.

Safety & Protection

Protection Technologies (DPT), Building Innovations (BI), Sustainable Solutions (DSS)

- 3Q Comments**
- Sales up 5% on higher volumes
 - Higher volume primarily reflects increased demand for U.S. ballistics military protection, garments and construction products
 - Operating earnings up 16% due to higher volume and productivity gains, slightly offset by a weaker sales mix

- 4Q Outlook**
- Sales up modestly reflecting expected continued improvement in industrial markets. Global public sector remains very soft
 - Earnings up substantially, reflecting improving demand and productivity gains

* Segment sales include transfers.
** See schedule C in the earnings news release for reconciliation of non-GAAP measures.

Safety & Protection

Sales were up 5 percent on higher volumes. The higher volumes primarily reflect increased demand in US ballistics military protection, improvements in certain industrial segments, garments and construction, offsetting very soft other global public sector markets. Sales to customers in the Asia Pacific region were particularly strong for the segment, replacing lagging demand in other public sector markets. Operating earnings increased 16 percent primarily due to higher volume and productivity gains, slightly offset by weaker sales mix.

For the fourth quarter, we expect sales to be up modestly year over year, while earnings are expected to be up substantially. These results reflect continued strong demand and productivity gains. Additionally, operating earnings and margin improvements will continue, due to improving demand in industrial and construction markets, with ongoing productivity actions despite a slightly weaker mix.

Use of Non-GAAP Measures

This Commentary includes information that does not conform to generally accepted accounting principles (GAAP). Management believes that analysis of this data is meaningful to investors because they provide insight with respect to ongoing operating results of the company. Such measurements are not recognized in accordance with GAAP and should not be viewed as an alternative to GAAP measures of performance. Furthermore, these measures may not be consistent with similar measures provided by other companies. Reconciliations of non-GAAP measures to GAAP are provided in schedules A, C and D to the Company's third quarter 2013 Earnings News Release, available on the Investor Center website at <http://www.dupont.com>.

Forward-Looking Statements: This segment commentary contains forward-looking statements or provides forward-looking information. All statements that address expectations or projections about the future are forward-looking statements. Some of these statements include words such as "plans," "expects," "will," "anticipates," "believes," "intends," and "estimates." Although they reflect our current expectations, these statements are not guarantees of future performance, but involve a number of risks, uncertainties, and assumptions. Some of which include: fluctuations in energy and raw material prices; failure to develop and market new products and optimally manage product life cycles; global economic and capital markets conditions; litigation and environmental matters; changes in laws and regulations or political conditions; business or supply disruptions; ability to protect and enforce the company's intellectual property rights; and successful integration of acquired business and separation of underperforming or non-strategic assets. The company does not undertake to update any forward-looking statements as a result of future developments or new information.
