

Conflict Minerals Report

This is the Conflict Minerals Report for Calgon Carbon Corporation (“Calgon Carbon”, “we” or “our”), filed with the United States Securities and Exchange Commission (“SEC”) pursuant to Rule 13p-1 under the Securities Exchange Act of 1934 (the “Rule”) for the reporting period from January 1, 2016 to December 31, 2016. The Rule was adopted by the SEC to implement reporting and disclosure requirements related to conflict minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (“Dodd-Frank Act”). The Rule imposes certain reporting obligations on SEC registrants whose manufactured products contain conflict minerals which are necessary to the functionality or production of their products. “Conflict minerals” are defined as cassiterite, columbite-tantalite, gold, wolframite, and their derivatives, which are limited to tin, tantalum, tungsten, and gold (“3TG”) for the purposes of this assessment.

If a registrant can establish that the conflict minerals in its products originated from sources other than the Democratic Republic of the Congo (“DRC”) or an adjoining country, or from recycled and scrap sources, the registrant must submit a specialized disclosure report under Form SD that describes the steps that the registrant took to determine the origin of the conflict minerals in its products.

If a registrant has reason to believe that any of the conflict minerals in its supply chain may have originated in the DRC or an “adjoining country” (the “Covered Countries”) defined by the SEC, or if the registrant is unable to determine the country of origin of those conflict minerals, then the registrant must exercise due diligence on the source of such conflict minerals and the chain of custody, and the registrant must annually submit a Conflict Minerals Report to the SEC that includes a description of those due diligence measures.

The report presented herein has not been audited by an independent private sector auditor, as the Rule provides that if a registrant’s products are not found to be “DRC conflict free”, then such audit is not required.

1. Company Overview

Calgon Carbon Corporation, incorporated in 1967 under the laws of the State of Delaware, is a global leader in the manufacture, supply, reactivation, and application of activated carbons and the manufacture of ballast water treatment (BWT), ultraviolet (UV) light disinfection, and advanced ion-exchange (IX) technologies. These technologies are applied by customers around the world for the treatment of drinking water, wastewater, ballast water, air emissions, and a variety of industrial and commercial manufacturing processes.

2. Products Overview

We manufacture products that may contain 3TG, such as the ISEP[®] and CSEP[®], the C3 Series[™], and the Hyde GUARDIAN[®] System. CSEP[®] and ISEP[®] involve a mechanical and process methodology to efficiently bring into contact liquids and solids as two counter-current contacting streams. The C³ Series[™] wastewater disinfection systems use UV light energy to disinfect wastewater and prevent the spread of waterborne pathogens to lakes, streams, rivers and coastal waters. The Hyde GUARDIAN[®] System relies on physical solid-liquid separation through surface filtration using automatic backwashing filters and physical disinfection via an UV technology. The products are manufactured in our plants.

We determined that during the 2016 calendar year, we manufactured and sub-contracted to manufacture products containing conflict minerals and that the use of these minerals is necessary to the functionality or production of these products.

3. Supply Chain Overview

We rely on our direct suppliers to provide information on the origin of the conflict minerals contained in components which are included in our products. The methods we used to try to determine the origin of conflict minerals in our products included:

- sending letters to our direct suppliers and explaining the rule;
- soliciting survey responses from relevant suppliers of components of our products, using the standard Conflict Minerals Reporting Template designed by the Electronic Industry Citizenship Coalition (EICC) and the Global e-Sustainability Initiative (GeSI);
- sending reminders to suppliers who did not respond to our requests for information;
- if no response is obtained at this point then the supplier's agreement will be considered for termination; and
- reviewing responses that we received from our suppliers, by compiling a consolidated list of smelters received and performing due diligence on the quality of those smelters.

4. Reasonable Country of Origin Inquiry ("RCOI") and RCOI conclusion

We conducted an analysis of our products and found that 3TG can be found in our products and are necessary to the functionality or production of those products. Therefore, we are subject to the reporting obligations of Rule 13p-1.

We conducted a survey of our active suppliers using the template developed by EICC and GeSI, known as the Conflict Minerals Reporting Template.

At the outset of our 2016 RCOI, we elected to survey our entire known component and outsourced manufacturing supply chain. During the process of our review, we identified 235 suppliers who fell within the scope of our RCOI. We sent the Conflict Minerals Reporting Template to those 235 suppliers and received 234 (99%) responses. Of these responding suppliers, 72 (30%) responded yes as to having one or more of the regulated metals (3TG) necessary to the functionality or production of the products they supply to Calgon Carbon, 1 out of the 72 responded that the conflict minerals supplied came from a recycled or scrap source and 38 out of the 72 responded that the conflict minerals supplied were either considered Conflict Free Sourcing Initiative (“CFSI”) or Conflict Free Smelter Program (“CFSP”) compliant, 13 of the 72 stated that their supply chain contained conflict minerals supplied by the DRC but were unable to identify if those minerals were recycled, scrap, CFSI or CFSP certified. The remaining 22 respondents confirmed that their 3GTs did not derive from conflict countries. Calgon Carbon will take corrective action to ensure that these suppliers are either replaced or are able to produce more definitive sources.

Due to the breadth of our supply chain, it will take time for many of our suppliers who have not yet been able to determine their smelter locations to verify the exact origin of all of the minerals, and they may not succeed in determining the origin of all or any such minerals. However, a majority of our suppliers who have confirmed that conflict minerals exist in their products were able to furnish a Smelter List outlining a reasonable determination of origin for many of the 3TG contained in the products that they supply to us. A consolidated copy of these lists can be found attach hereto as Attachment #1.

Despite having conducted a good faith reasonable country of origin inquiry and due diligence process, we do not currently have sufficient information from all of our suppliers or other sources to determine the exact country of origin for all of the conflict minerals used in our products or identify the facilities or mines used to process those conflict minerals. Therefore, we cannot exclude the possibility that some of these conflict minerals may have originated in the Democratic Republic of the Congo or an adjoining country, as defined by the SEC.

As we progress with our supply chain due diligence processes, we hope to further develop transparency of our component part supply origin.

5. Conflict Mineral Procedure

Calgon Carbon is actively working with our global supply chain members to ensure that all products produced have been manufactured with materials not sourced from the Covered Countries.

In 2015, we developed a Conflict Mineral Procedure to ensure that the efforts of Calgon Carbon are in line with the framework established by the Organization of Economic Co-operative Development (“OECD”). This guide will help to remind employees of the importance to source with only suppliers who can furnish conflict free products.

A copy of our Conflict Minerals Statement has been published on our website at <http://phx.corporate-ir.net/phoenix.zhtml?c=89025&p=ConflictMineral>.

6. Due Diligence Program

6.1 Due Diligence Process

Our due diligence processes and efforts have been developed in conjunction with the third edition of the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas and the related supplements for 3TG. We designed our due diligence process to conform in all material respects with these OECD guidelines.

Our due diligence process includes the establishment of governance structures with cross functional team members and senior executives and communication with suppliers. We took measures to ensure that the findings of our supply chain risk assessment are cross checked amongst departments and then reported to designated members of our senior management.

6.2 Record Maintenance

We have established our due diligence compliance process and a documentation and record maintenance procedure to ensure the retention of relevant documentation in a structured electronic database.

6.3 Steps to Be Taken to Mitigate Risk and Maturing Due Diligence Program

As we progress with our due diligence program, we will continue to enhance our supplier communication and improve our due diligence data accuracy in order to mitigate the risk that the necessary conflict minerals contained in our products could benefit armed groups in the DRC or adjoining countries.

7. Identify and Assess Risk in the Supply Chain

Because of our size and the constant evolution of our supply chain, it is difficult to identify suppliers upstream from our direct suppliers, which is why we rely so heavily on our direct suppliers.

We have contacted the direct suppliers for our products. Of 235 suppliers that are within the scope of the RCOI, we received 234 (99%) responses to our request for information. Of these responding suppliers, 72 (28%) responded yes as to having one or more

of the regulated 3TG necessary to the functionality or production of the products they supply to Calgon Carbon, 1 out of the 72 responded that the conflict minerals supplied came from a recycled or scrap source and 38 out of the 72 responded that the conflict minerals supplied were either considered CFSI or CFSP compliant, 13 of the 72 stated that the conflict minerals contained in their products were supplied from the Covered Countries but did not specify if they were scrap, recycled, CFSI or CFSP certified. Calgon Carbon will confront these suppliers and take corrective actions to mitigate these risks.

8. Audit of Supply Chain Due Diligence

We do not have a direct relationship with 3TG smelters and refiners, nor do we perform direct audits of the other entities in our supply chain. However, we do rely upon industry efforts to influence smelters and refineries to participate in the EICC/GeSI Conflict-Free Smelter Program, as well as the efforts of our direct suppliers.

9. Continuous Improvement Efforts to Mitigate Risk

We intend to undertake the following next steps to improve our due diligence process and to gather additional information which will assist us to determine whether the conflict minerals we utilize benefit armed groups contributing to human rights violations:

- ▶ continue to conduct and report annually on the supply chain due diligence efforts that we conduct for the applicable conflict minerals;
- ▶ We have added terms and conditions in supplier contracts that place stipulations on our suppliers that's requires them to respond to conflict mineral related inquires or corrective action may be taken;
- ▶ attempt to validate supplier responses using information collected via independent conflict free smelter validation programs such as the EICC/GeSI Conflict Free Smelter Program;
- ▶ seek the products of another supplier if our current supplier cannot alter their supply chain or certify that the products supplied are conflict free; and
- ▶ ensure that suppliers understand and can meet our expectations from the onset.

10. Efforts to Determine Mine or Location of Origin

Calgon Carbon relies on the disclosure of our suppliers to determine what the location or mine that the 3TG may have originated from. Disclosed in the included Attachment #1 is our good faith effort to produce the approximate origin of these minerals.

11. Efforts to Determine Smelters or Refiners

Since Calgon Carbon depends solely on the responses of its direct suppliers, we are only able to provide a presumptive response based on those responses. Of the 72 suppliers who responded yes to the presence of 3TG in their products supplied to us, 68 provided a Smelter List. Those findings are included in Attachment #1 attached hereto.
