Kidde - Fact Sheet: CES 2016

Kidde brand smoke alarms, Secured by ADT Canopy

About the Product:

Kidde is an industry leader in smoke alarm development creating a diverse roster of alarms including battery-powered, wire-in and wireless system using the latest in alarm technology.

- Offers users the flexibility in smoke alarm selection
 - o Battery Operated: A less expensive and mobile alternative that continues working during a power outage. Also available with 10 year lithium batteries
 - o Hardwired: 120V AC wire-in alarms interconnect to provide the most immediate and complete security available. When any one interconnected alarm is triggered by smoke, all interconnected alarms within the home sound an immediate warning
 - o Wireless System: Wireless technology enables any home to have an interconnected system without installed wiring.

Secured by ADT Canopy

The diverse line of Kidde smoke alarms offers a fire prevention and detection solution for a broad audience with a variety of needs and now, when secured by ADT Canopy, you can notify the professional services you need at the touch of a button.

- Availability without a contract commitment lowers the bar of entry to first time smart home and mobile users
- Option for month-to-month monitoring terms allow for greater flexibility in service provision
- Blended brand efforts gives the audience the ability to trial smart security hardware and service from leading tech and security companies in one, inclusive device
- Diverse range of alarms covered by Canopy provides flexibility to consumers
- Use Case: When secured by ADT Canopy, the Kidde brand products will alert ADT's professional security network of unsafe air conditions or fire within your home as part of the Life Safety service.
