### Incident at the Rotem Amfert Plant in Israel

The Company wishes to report that on June 30<sup>th</sup> 2017 a dike partially collapsed at pool 3 which is used for the accumulation of phosphogypsum water which is a byproduct of the production processes at the plant of ICL's subsidiary, Rotem Amfert in Israel. The Company took action to immediately stop the flow of phosphogypsum water leaking out of the accumulation pool, all in full coordination with the competent authorities.

On July 1<sup>st</sup> 2017 a letter was received from the Israeli Ministry of Environmental Protection, wherein the Ministry ordered the discontinuation of use of the three active phosphogypsum water accumulation pools 1-3, and the submission of an alternative plan for the accumulation of effluents (phosphogypsum water) generated in the production process, as aforesaid.

The Company has submitted today an application for temporary use of alternative pool 4, and is continuing its efforts, aided by external experts, to find solutions for the continued operation of the Rotem plant and the short- and long-term restoration of the pools, all in coordination with the authorities. At the same time, the Company is acting to investigate the circumstances leading to the incident, to prevent its recurrence.

As of the date of this report, the Company is yet unable to fully assess the ramifications of the incident at the Rotem plant, including its environmental and financial implications, as well as the exposure to enforcement proceedings.
